

Amendments to the Specification

On page 8, please replace the paragraph starting on line 8 with the following:

Figures 21a-21f are lateral views illustrating various configurations of the electrode including ring-like, ball, hemispherical, cylindrical, conical and needle-like. Figures 21g-21h are lateral views illustrating distal-end structure associated with the electrodes.

On page 34, please replace the paragraph starting on line 16 with the following:

In various embodiments, electrodes 18e can have a variety of shapes and geometries. Referring now to Figures 21a-21f, example shapes and geometries can include, but are not limited to, ring-like (Figure 21a), ball (Figure 21b), hemispherical (Figure 21c), cylindrical (Figure 21d), conical (Figure 21e), needle-like (Figure 21f), and combinations thereof. Figures 21g and 21h show a needle electrode 18e and 18, respectively, having at least one injection port, such as ports 23, through which fluid material can be injected. Guidewire 15 is used to position the introducer 12 and/or electrode.
